

Topic: Project 1 - Basic Sales Dashboard

1. Import Data

- Open Power BI Desktop → **Home** → **Get Data** → **Excel**.
 - Select **Retail_Sales_Data.xlsx** → Load into model.
-

2. Create Table Visual

- In **Report view**, insert a **Table visual**.
 - Add **Region** to *Rows*.
 - Add **Sales** to *Values*.
-

3. Add Slicer for Product

- Insert a **Slicer visual**.
 - Drag **Product** field into slicer.
 - Now you can filter visuals by Product.
-

4. Dark Mode Theme

- Go to **View** → **Themes** → **Browse for themes**.
 - Select **Dark mode** (built-in, or import a JSON theme file).
-

5. Purpose of Data/Model View

- **Data view**: Explore tables, columns, and data values.
 - **Model view**: Manage relationships, cardinality, directions, and optimize schema.
-

6. Build a Dashboard

- **Bar chart**: Insert clustered bar → Region in *Axis*, Sales in *Values*.
 - **Line chart**: Insert line chart → Date in *Axis*, Sales in *Values*.
 - **Card visual**: Insert card → Total Profit in *Values*.
-

7. Drill-through Filter

- Create a new page (Detailed Sales).
 - Add **Region** to *Drill-through filters*.
 - Insert a detail table (Product, Sales, Profit, Date).
 - On main page: Right-click a Region → Drill-through → Detailed Sales.
-

8. Conditional Formatting

- Select the table/bar chart → **Format** → **Data colors** → **Conditional formatting**.
 - Rule: highlight Region in green if Profit > threshold, red if low.
-

9. Publish to Power BI Service

- Click **Home** → **Publish**.
 - Choose your workspace → report uploads to Power BI Service.
-

10. Share with Colleague

- In Power BI Service, open the report.
 - Click **Share** → **Enter colleague's email** → Send.
 - They need at least a **Viewer role** or Pro license depending on workspace type.
-

11. Sales Growth % via Quick Measures

- Right-click your table → **New Quick Measure**.
 - Select *Calculation* → *Time intelligence* → *Year-over-year change*.
 - Base value = Sales.
 - Power BI auto-generates a DAX measure “Sales Growth %.”
-

12. Optimize Dataset

- In Power Query:
 - Remove unused columns.
 - Filter unnecessary rows.
 - Disable “Auto Date/Time.”
 - This speeds up refresh and reduces model size.
-

13. Troubleshoot Slicers Not Affecting All Visuals

- Select slicer → **Format** → **Edit interactions**.
 - Ensure filter icon is active on all visuals that should respond.
-

14. Embed into PowerPoint

- In Power BI Service → Open report.
 - **File** → **Export** → **Embed in PowerPoint (Preview)**.
 - This inserts live Power BI visuals into a slide deck.
-

15. Scheduled Refresh

- In Power BI Service → Dataset → Settings → Scheduled refresh.
- Enter gateway credentials if data source is on-prem.
- Set refresh frequency (daily, weekly).
